

CARLISLE TRADITIONAL STAINS AND FINISHES

After years of research and development, Carlisle now offers an entirely new line-up of urethane-based stains and finishes that are eco-friendly, user-friendly and offer the same gorgeous look that our oil-based products have long been noted for.

- BEAUTIFUL RESULTS WITHOUT ALL THE FUSS -

Carlisle's new Traditional Stains and Finishes offer a remarkable deep, rich patina that enhances the wood's natural beauty and looks rubbed in rather than the painted on. Yet they go on easily, dry in as little as two hours and fully cure in 24 to 36 hours.

- LOW TO ZERO VOCs -

Available in all 13 of our historic colors, Carlisle Traditional Stains contain no hazardous materials and emit very little odor with zero VOCs.

Carlisle's Traditional Finishes are final topcoats which are offered in two versions: Clear and Amber. Both contain very low VOCs. Our clear is literally the clearest on the market, while our amber adds a touch of aged richness.

- TOUGH WEARING TRADITIONAL FINISHES THAT CAN BE TOUCHED UP -

These new Carlisle products are the hardest and most durable finishes we've ever offered. Yet, unlike most urethane-based finishes, they can be touched up without having to re-do the whole floor.

It was hard to improve on our old stains and finishes but we've done it. Fifteen different ways.
